

**Product Description**

LF-GOE040YF/YE(E) series is a 40W LED driver. LF-GOE040YF(E) is dimmable. LF-GOE040YE(E) is non-dimmable. The driver has rated input voltage of 220-240Vac. Input voltage limit is 180-264Vac. The new casing design theory is applied in street lights, tunnel lights and lighting projects. It has all-round protections including surge protection, over-voltage protection, short circuit protection and over temperature protection, which greatly improves the product stability. There is a potentiometer on the side that helps to adjust the output current / power of the driver.

Remarks	<p>1. It is recommended that customer should install protection devices for surge, for over voltage and for undervoltage to ensure safety before connecting to electricity.</p> <p>2. As an accessory, the LED driver is not the only factor determining the EMC performance of the LED light fixture. The structure and the wiring of the light fixture are also relevant. Thus it's strongly recommended the LED light fixture manufacturer re-confirms the EMC of the whole LED light fixture.</p> <p>3. It's suggested that the user should use a slotted screwdriver or a Philips screwdriver to adjust the output current in case the potentiometer is damaged. The screwdriver with a 2mm slot head is recommended. Torque is NO higher than 0.5KNM. Make sure the insulation of the screwdriver is good enough.</p> <p>4. The total output power of the light fixture should NOT exceed the maximum rated output power of the driver. ⚠</p> <p>5. In compliance with ERP2019, for using the dimmer or system that cannot be dimmed to off to ensure that the LED driver does not enter standby mode.</p>

Instructions of Dimming

Dimming Diagram

**Operations of 0-10V, PWM & RX Dimming**

- Connect the 0-10V, PWM or Rx signal to the DIM terminals.
- In 0-10V dimming mode, when the input voltage is less than 0.3V, the light will be turned off. When it's more than 0.5V, the light will be turned on.
- The minimum dimming depth of 0.5-10V is 10%.
- The dimming depth of PMW is 10%.
- Requirement of PWM signal: 400-3000 (Hz); amplitude: 10(V)
- The range of Rx is 0-100KΩ
- DIM+/- (no signal connection): 100% rated current
