#### 1. Over View

GDEM0154C90 is an Active Matrix Electrophoretic Display (AM EPD), with interface and a reference system design. The display is capable to display images at 1-bit white, black and yellow full display capabilities. The 1.54inch active area contains 152×152 pixels. The module is a TFT-array driving electrophoresis display, with integrated circuits including gate driver, source driver, MCU interface, timing controller, oscillator, DC-DC, SRAM, LUT, VCOM. Module can be used in portable electronic devices, such as Electronic Shelf Label (ESL) System.

#### 2. Features

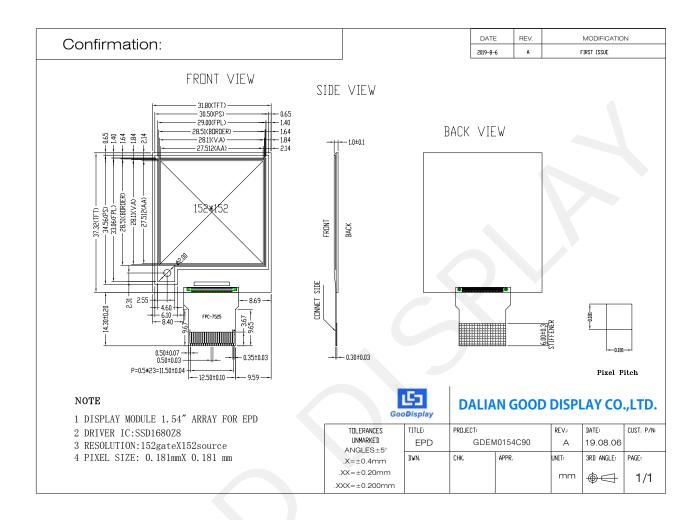

- ♦152×152 pixels display
- ◆High contrast High reflectance
- ◆Ultra wide viewing angle Ultra low power consumption
- ◆Pure reflective mode
- ◆Bi-stable display
- ◆Commercial temperature range
- ◆Landscape portrait modes
- ◆Hard-coat antiglare display surface
- ◆Ultra Low current deep sleep mode
- ◆On chip display RAM
- ◆Waveform can stored in On-chip OTP or written by MCU
- ◆Serial peripheral interface available
- ◆On-chip oscillator
- ♦On-chip booster and regulator control for generating VCOM, Gate and Source driving voltage
- ◆I<sup>2</sup>C signal master interface to read external temperature sensor
- ◆Built-in temperature sensor

### 3. Mechanical Specification

Parameter	Specifications	Unit	Remark
Screen Size	1.54	Inch	
Display Resolution	152(H)×152(V)	Pixel	DPI:140
Active Area	27.512×27.512	mm	
Pixel Pitch	Pixel Pitch 0.181×0.181		
Pixel Configuration	Square		
Outline Dimension	31.8(H)×37.32 (V) ×1.0 (D)	mm	
Weight	2.18±0.5	g	

### 4. Mechanical Drawing of EPD Module

# 5. Input/output Pin Assignment

No.	Name	I/O	Description	Remark
1	NC		Do not connect with other NC pins	Keep Open
2	GDR	О	N-Channel MOSFET Gate Drive Control	
3	RESE	I	Current Sense Input for the Control Loop	
4	NC	NC	Do not connect with other NC pins	Keep Open
5	VSH2	С	Positive Source driving voltage(Yellow)	
6	TSCL	О	I2C Interface to digital temperature sensor Clock pin	
7	TSDA	I/O	I2C Interface to digital temperature sensor Data pin	
8	BS1	I	Bus Interface selection pin	Note 5-5
9	BUSY	О	Busy state output pin	Note 5-4
10	RES#	I	Reset signal input. Active Low.	Note 5-3
11	D/C#	I	Data /Command control pin	Note 5-2
12	CS#	I	Chip select input pin	Note 5-1
13	SCL	I	Serial Clock pin (SPI)	
14	SDA	I/O	Serial Data pin (SPI)	
15	VDDIO	Р	Power Supply for interface logic pins It should be connected with VCI	
16	VCI	P	Power Supply for the chip	
17	VSS	P	Ground	
18	VDD	C	Core logic power pin VDD can be regulated internally from VCI. A capacitor should be connected between VDD and VSS	
19	VPP	P	FOR TEST	Keep Open
20	VSH1	С	Positive Source driving voltage	
21	VGH	С	Power Supply pin for Positive Gate driving voltage and VSH1	
22	VSL	C	Negative Source driving voltage	
23	VGL	С	Power Supply pin for Negative Gate driving voltage VCOM and VSL	
24	VCOM	C	VCOM driving voltage	

I = Input Pin, O =Output Pin, I/O = Bi-directional Pin (Input/output), P = Power Pin, C = Capacitor Pin

**Note 5-1:** This pin (CS#) is the chip select input connecting to the MCU. The chip is enabled for MCU communication only when CS# is pulled LOW.

**Note 5-2:** This pin is (D/C#) Data/Command control pin connecting to the MCU in 4-wire SPI mode. When the pin is pulled HIGH, the data at SDA will be interpreted as data. When the pin is pulled LOW, the data at SDA will be interpreted as command.

Note 5-3: This pin (RES#) is reset signal input. The Reset is active low.\

**Note 5-4:** This pin is Busy state output pin. When Busy is High, the operation of chip should not be interrupted, command should not be sent. The chip would put Busy pin High when -Outputting display waveform -Communicating with digital temperature sensor

Note 5-5: Bus interface selection pin

BS1 State MCU Interface					
L	4-lines serial peripheral interface(SPI) - 8 bits SPI				
Н	3- lines serial peripheral interface(SPI) - 9 bits SPI				

#### 6. Electrical Characteristics

### 6.1 Absolute Maximum Rating

Parameter	Symbol	Rating	Unit
Logic supply voltage	VCI	-0.5 to +4.0	V
Logic Input voltage	VIN	-0.5 to VCI +0.5	V
Logic Output voltage	VOUT	-0.5 to VCI +0.5	V
Operating Temp range	TOPR	0 to +40	°C.
Storage Temp range	TSTG	-25 to+40	°C.
Optimal Storage Temp	TSTGo	23±2	°C.
Optimal Storage Humidity	HSTGo	55±10	%RH

#### Note:

1.Maximum ratings are those values beyond which damages to the device may occur. Functional operation should be restricted to the limits in the Panel DC Characteristics tables.

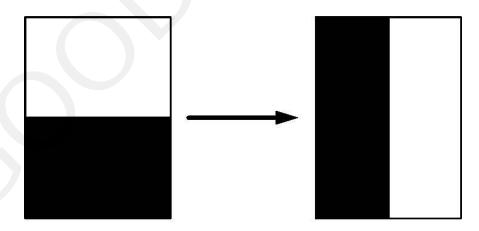

#### **6.2 Panel DC Characteristics**

The following specifications apply for: VSS=0V, VCI=3.0V, TOPR =23°C.

Parameter	Symbol	Condition	Applicab le pin	Min.	Typ.	Max.	Unit
Single ground	Vss	-		-	0	-	V
Logic supply voltage	Vci	-	VCI	2.2	3.0	3.7	V
Core logic voltage	$V_{\mathrm{DD}}$		VDD	1.7	1.8	1.9	V
High level input voltage	Vih	-	-	0.8 Vci		1	V
Low level input voltage	VIL	-	-	-	-	0.2 Vci	V
High level output voltage	Voh	IOH = -100uA	-	0.9 Vci	-		V
Low level output voltage	Vol	IOL = 100uA	-	-	-	0.1 Vci	V
Typical power	P <sub>TYP</sub>	$V_{CI} = 3.0V$	-	-	8.4	-	mW
Deep sleep mode	PSTPY	V <sub>CI</sub> =3.0V	-	-	0.003	-	mW
Typical operating current	Iopr_VCI	$V_{CI} = 3.0V$	-	-	2.8		mA
Image update time	-	23 °C	-	-	30	1	sec
Sleep mode current	Islp_Vcı	DC/DC off No clock No input load Ram data retain		-	20		uA
Deep sleep mode current	Idslp_Vci	DC/DC off No clock No input load Ram data not retain	-	-	1	5	uA

**Notes:** 1. The typical power is measured with following transition from horizontal 2 scale pattern to vertical 2 scale pattern.

- 2. The deep sleep power is the consumed power when the panel controller is in deep sleep mode.
- 3. The listed electrical/optical characteristics are only guaranteed under the controller & waveform provided by Good Display.

### **6.3 Panel DC Characteristics(Driver IC Internal Regulators)**

The following specifications apply for: VSS=0V, VCI=3.0V, TOPR =23°C.

Parameter	Symbol	Condition	Applicable pin	Min.	Typ.	Max.	Unit
VCOM output voltage	VCOM	-	VCOM	1	TBD	-	V
Positive Source output voltage	$V_{SH}$	-	S <sub>0</sub> ~S <sub>151</sub>	+14.5	+15	+15.5	V
Negative Source output voltage	Vsl	-	S0~S151	-15.5	-15	-14.5	V
Positive gate output voltage	Vgh	-	G0~G151	+21	+22	+23	V
Negative gate output voltage	Vgl	-	G0~G151	-21	-20	-19	V

#### **6.4 Panel AC Characteristics**

#### **6.4.1 MCU Interface Selection**

The pin assignment at different interface mode is summarized in Table 6-4-1. Different MCU mode can be set by hardware selection on BS1 pins. The display panel only supports 4-wire SPI or 3-wire SPI interface mode.

Pin Name	Data/Comm	and Interface	Control Signal			
Bus interface	SDA	SCL	CS#	D/C#	RES#	
BS1=L 4-wire SPI	SDA	SCL	CS#	D/C#	RES#	
BS1=H 3-wire SPI	SDA	SCL	CS#	L	RES#	

### 6.4.2 MCU Serial Interface (4-wire SPI)

The serial interface consists of serial clock SCL, serial data SDA, D/C#, CS#. This interface supports Write mode and Read mode.

Function	CS#	D/C#	SCL
Write command	L	L	1
Write data	L	Н	1

**Note:** ↑ stands for rising edge of signal

In the write mode SDA is shifted into an 8-bit shift register on every rising edge of SCL in the order of D7, D6, ... D0. The level of D/C# should be kept over the whole byte . The data byte in the shift register is written to the Graphic Display Data RAM /Data Byte register or command Byte register according to D/C# pin.

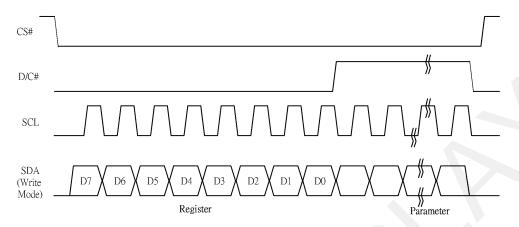

Figure 6-1: Write procedure in 4-wire SPI mode

#### In the Read mode:

- 1. After driving CS# to low, MCU need to define the register to be read.
- 2. SDA is shifted into an 8-bit shift register on every rising edge of SCL in the order of D7, D6, ... D0 with D/C# keep low.
- 3. After SCL change to low for the last bit of register, D/C# need to drive to high.
- 4. SDA is shifted out an 8-bit data on every falling edge of SCL in the order of D7, D6, ... D0.
- 5. Depending on register type, more than 1 byte can be read out. After all byte are read, CS# need to drive to high to stop the read operation.

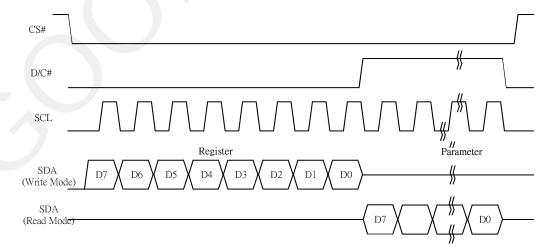

Figure 6-2: Read procedure in 4-wire SPI mode

### 6.4.3 MCU Serial Interface (3-wire SPI)

The 3-wire serial interface consists of serial clock SCL, serial data SDA and CS#. This interface also supports Write mode and Read mode.

The operation is similar to 4-wire serial interface while D/C# pin is not used. There are altogether 9-bits will be shifted into the shift register on every ninth clock in sequence: D/C# bit, D7 to D0 bit. The D/C# bit (first bit of the sequential data) will determine the following data byte in the shift register is written to the Display Data RAM (D/C# bit = 1) or the command register (D/C# bit = 0).

Function	CS#	D/C#	SCL
Write command	L	Tie	<b>↑</b>
Write data	L	Tie	<b>↑</b>

**Note:** ↑ stands for rising edge of signal

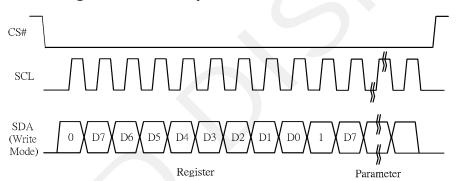

Figure 6-3: Write procedure in 3-wire SPI mode

#### In the Read mode:

- 1. After driving CS# to low, MCU need to define the register to be read.
- 2. D/C=0 is shifted thru SDA with one rising edge of SCL
- 3. SDA is shifted into an 8-bit shift register on every rising edge of SCL in the order of D7, D6, ... D0.
- 4. D/C=1 is shifted thru SDA with one rising edge of SCL
- 5. SDA is shifted out an 8-bit data on every falling edge of SCL in the order of D7, D6, ... D0.
- 6. Depending on register type, more than 1 byte can be read out. After all byte are read, CS# need to drive to high to stop the read operation.

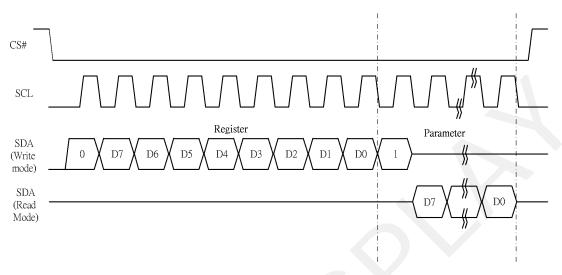

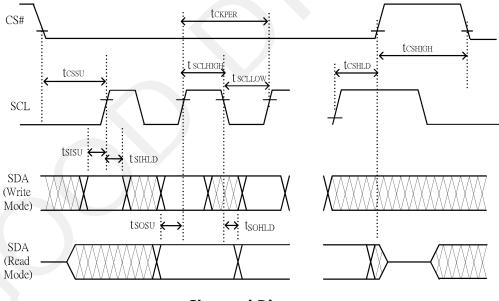

Figure 6-4: Read procedure in 3-wire SPI mode

#### **6.4.4 Interface Timing**

The following specifications apply for: VSS=0V, VCI=3.0V,  $TOPR=23^{\circ}C$ .

#### **Serial Interface Timing Characteristics**

 $(VCI - VSS = 2.2V \text{ to } 3.7V, TOPR = 23^{\circ}C, CL=20pF)$ 

#### Write mode

Symbol	Parameter	Min	Тур.	Max	Unit
fSCL	SCL frequency (Write Mode)			20	MHz
tCSSU	Time CS# has to be low before the first rising edge of SCLK	60		7	ns
tCSHLD	Time CS# has to remain low after the last falling edge of SCLK	65			ns
tCSHIGH	Time CS# has to remain high between two transfers	100			ns
tSCLHIGH	Part of the clock period where SCL has to remain high	25			ns
tSCLLOW	Part of the clock period where SCL has to remain low	25			ns
tSISU	Time SI (SDA Write Mode) has to be stable before the next rising edge of SCL	10			ns
tSIHLD	Time SI (SDA Write Mode) has to remain stable after the rising edge of SCL	40			ns

#### **Read mode**

Symbol	Parameter	Min	Тур.	Max	Unit
fSCL	SCL frequency (Read Mode)			2.5	MHz
tCSSU	Time CS# has to be low before the first rising edge of SCLK	100			ns
tCSHLD	Time CS# has to remain low after the last falling edge of SCLK	50			ns
tCSHIGH	Time CS# has to remain high between two transfers	250			ns
tSCLHIG H	Part of the clock period where SCL has to remain high	180			ns
tSCLLOW	Part of the clock period where SCL has to remain low	180			ns
tSOSU	Time SO(SDA Read Mode) will be stable before the next rising edge of SCL		50		ns
tSOHLD	Time SO (SDA Read Mode) will remain stable after the failing edge of SCL		0		ns

### 7.Command Table

											Camara	
R/W#	D/C#	Hex	D7	D6	D5	D4	D3	D2	D1	D0	Comman d	Description

### 8. Optical Specification

Measurements are made with that the illumination is under an angle of 45 degree, the detection is perpendicular unless otherwise specified

Symbol	Parameter	Conditions	Min	Тур.	Max	Units	Notes
R	White Reflectivity	White	30	35	-	%	8-1
CR	Contrast Ratio	indoor	8:1		-		8-2
GN	2Grey Level	-	-	DS+(WS-DS)*n(m-1)			8-3
T update	Image update time	at 23 °C	-	30	-	sec	
Life		Topr		1000000times or 5years			

**Notes:** 8-1. Luminance meter: Eye-One Pro Spectrophotometer.

8-2. CR=Surface Reflectance with all white pixel/Surface Reflectance with all black pixels.

8-3 WS: White state, DS: Dark state

### 9. Handling, Safety, and Environment Requirements

#### Warning

The display glass may break when it is dropped or bumped on a hard surface. Handle with care. Should the display break, do not touch the electrophoretic material. In case of contact with electrophoretic material, wash with water and soap.

#### Caution

The display module should not be exposed to harmful gases, such as acid and alkali gases, which corrode electronic components. Disassembling the display module.

Disassembling the display module can cause permanent damage and invalidates the

warranty agreements.

Observe general precautions that are common to handling delicate electronic components. The glass can break and front surfaces can easily be damaged. Moreover the display is sensitive to static electricity and other rough environmental conditions.

#### **Data sheet status**

Product specification: This data sheet contains final product specifications.

#### **Limiting values**

Limiting values given are in accordance with the Absolute Maximum Rating System (IEC 134). Stress above one or more of the limiting values may cause permanent damage to the device. These are stress ratings only and operation of the device at these or at any other conditions above those given in the Characteristics sections of the specification is not implied. Exposure to limiting values for extended periods may affect device reliability.

#### **Application information**

Where application information is given, it is advisory and does not form part of the specification.

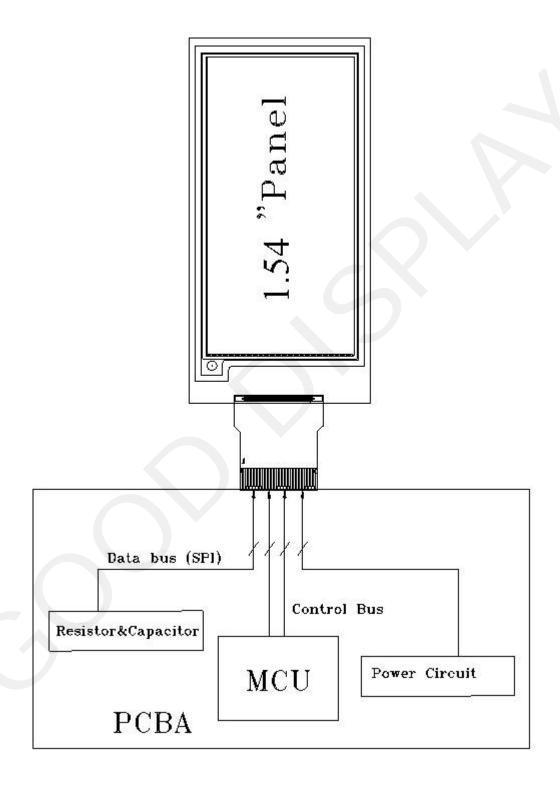

# 10. Reliability Test

NO	Test items	Test condition		
1	Low-Temperature Storage	T = -25°C, 240 h Test in white pattern		
2	High-Temperature Storage	T=60°C, RH=40%, 240h Test in white pattern		
3	High-Temperature Operation	T=40°C, RH=35%, 240h		
4	Low-Temperature Operation	0°C, 240h		
5	High-Temperature, High-Humidity Operation	T=40°C, RH=80%, 240h		
6	High Temperature, High Humidity Storage	T=50°C, RH=80%, 240h Test in white pattern		
7	Temperature Cycle	1 cycle:[-25°C 30min]→[+60 °C 30 min] : 50 cycles Test in white pattern		
8	UV exposure Resistance	765W/m² for 168hrs,40 °C Test in white pattern		
9	ESD Gun	Air+/-15KV;Contact+/-8KV  (Test finished product shell, not display only)  Air+/-8KV;Contact+/-6KV  (Naked EPD display, no including IC and FPC area)  Air+/-4KV;Contact+/-2KV  (Naked EPD display, including IC and FPC area)		

**Note:** Put in normal temperature for 1hour after test finished, display performance is ok.

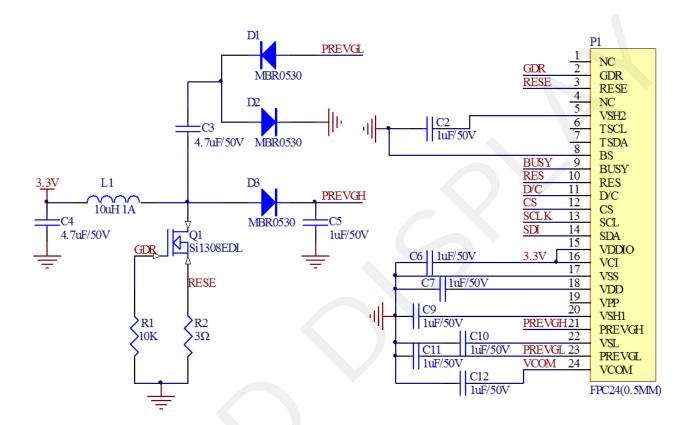

# 11. Block Diagram

# 12. Typical Application Circuit with SPI Interface

### 14. Matched Development Kit

Our Development Kit designed for SPI E-paper Display aims to help users to learn how to use E-paper Display more easily. It can refresh black-white E-paper Display and three-color (black, white and red/Yellow) Good Display 's E-paper Display. And it is also added the functions of USB serial port, Raspberry Pi and LED indicator light ect.

DESPI Development Kit consists of the development board and the pinboard.

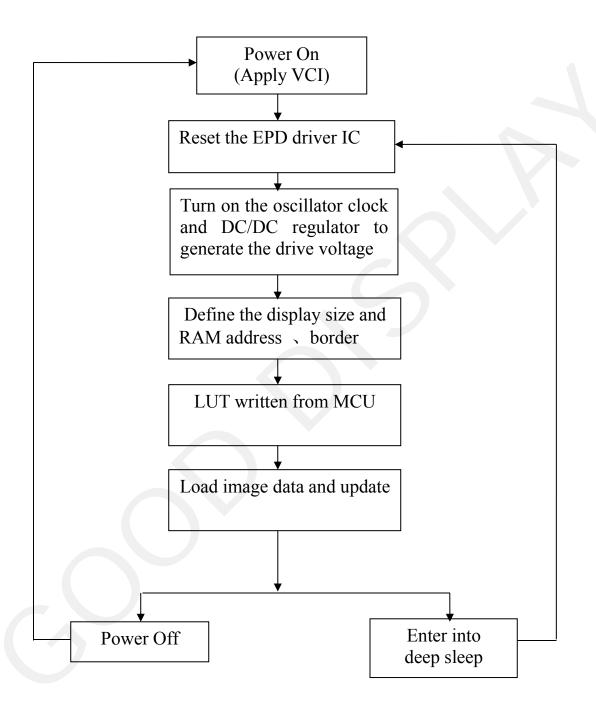

More details about the Development Kit, please click to the following link:

http://www.e-paper-display.com/products\_detail/productId=402.html

2	Glass crack	Not Allow	MA	Visual	Zone A Zone B
3	Dirty	Allowed if can be removed	MI	/ Microscope	Zone A Zone B
4	Chips/Scratch/ Edge crown	$X \le 3$ mm, $Y \le 0.5$ mmAnd without affecting the electrode is permissible $2$ mm $\le X$ or $2$ mm $\le Y$ Not Allow $W \le 0.1$ mm, $L \le 5$ mm, No harm to the electrodes and $N \le 2$ allow	MI	Visual / Microscope	Zone A Zone B

	+	<del>1</del>			
5	TFT Cracks	Not Allow	MA	Visual / Microscope	Zone A Zone B
6	Dirty/ foreign body	Allowed if can be removed/ allow	MI	Visual / Microscope	Zone A / Zone B
7	FPC broken/ Goldfingers xidation/ scratch	Not Allow	MA	Visual / Microscope	Zone B
8	TFT edge bulge /TFT chromatic aberration	TFT edge bulge: $X \le 3$ mm, $Y \le 0.3$ mm Allowed TFT chromatic aberration :Allowed	MI	Visual / Microscope	Zone A Zone B
9	PCB damaged/ Poor welding/ Curl	PCB (Circuit area) damaged Not Allow PCB Poor welding Not Allow PCB Curl≤1%		Þ	
10	Edge glue height/ Edge glue bubble	Edge Adhesives H≤PS surface (Including protect film) Edge adhesives seep in≤1/2 Margin width Length excluding Edge adhesives bubble: bubble Width ≤1/2 Margin width; Length ≤5.0mm。 n≤5	MI	Visual / Ruler	Zone B
11	Protect film	Surface scratch but not effect protect function, Allowed		Visual Inspection	
12	Silicon glue	Thickness ≤ PS surface(With protect film): Full cover the IC; Shape: The width on the FPC ≤ 0.5mm (Front) The width on the FPC≤1.0mm (Back) smooth surface,No obvious raised.	MI	Visual Inspection	
13	Warp degree (TFT substrate)	FPL TFT t≤1.0mm	MI	Ruler	
14	Color difference in COM area (Silver point area)	Allowed		Visual Inspection	

# 16. Packing

#### 17. Precautions

- (1) Do not apply pressure to the EPD panel in order to prevent damaging it.
- (2) Do not connect or disconnect the interface connector while the EPD panel is in operation.
- (3) Do not touch IC bonding area. It may scratch TFT lead or damage IC function.
- (4) Please be mindful of moisture to avoid its penetration into the EPD panel, which may cause damage during operation.
- (5) If the EPD Panel / Module is not refreshed every 24 hours, a phenomena known as "Ghosting" or "Image Sticking" may occur. It is recommended to refreshed the ESL /EPD Tag every 24 hours in use case. It is recommended that customer ships or stores the ESL / EPD Tag with a completely white image to avoid this issue
- (6) High temperature, high humidity, sunlight or fluorescent light may degrade the EPD panel's performance. Please do not expose the unprotected EPD panel to high temperature, high humidity, sunlight, or fluorescent for long periods of time.
