# Introduction

Ailong is founded in early 90's as a local workshop in Hangzhou for producing construction stamping parts. Through years of partnership with Tatsumi Corporation, a world class leading construction Corporation, we have gradually built up a solid foundation of R & D and manufacturing capabilities of metal reinforcement fittings for timber construction as well as to provide strength and stability against Earthquakes. Ailong's involvement begins with the earliest phase in the creation of new generations of products and continuous dialogue with customers throughout design and development stage.

Over the years, the ever growing customer based and shared know-how has taken us one step forward, our customers are no longer limited to core expertise. We are also supplying components to customers from various installation and fixation applications such as tarpaulin structure, security fencing, animal husbandry production and ventilation and power supply network , etc. Our workshop covers 53,000 square meters, equipped with advanced precise production and testing equipments. With the backup of our solid manufacturing capabilities and years of experience in parts design and production, our R & D teams and engineers will help your business grow by concentrating your resources to increase productivity at decreased costs.

## Metal Reinforcement Fittings For Timber Construction

This product range is designed to improve strength and stability of the timber construction and particularly minimizing damage during earthquakes, which is a main threat to human lives and injuries all over the world. It is the basic requirement and also Ailong's philosophy that always makes sure each individual component part is according to specified requirement without defects. Our production workshop and quality management system are setup in order to fulfill the need of very high expectation and standard of Japan market. The product range is Certified by Japan Housing and Wood Technology Center (HOWTEC).

## Mechanical and Electrical Services Fixation

Our multi-purpose U-channel system offers you a simple and cost effective way on all kinds of electrical and mechanical services fixing and installing applications. In order to adapt into latest development of innovative applications, the product range and accessories are constantly expanding and developing. We are also able to modify and redesign parts to suit your special requirement.

## Preassembling Service

By performing preassembling processes at our professional workshop before delivery, our experienced engineers ensure you the critical procedures are performed as per requirement. It will save you onsite work hours and cost, in the same time improve workmanship quality stability. More importantly, it is easier for our customers to make accurate estimation on material and cost consumption during planning phase.
