## 4.2 FS-2 and FS-3 Probe Positioning Fixtures:

The FS-3 is an adjustable fixture to support and position probes with respect to the target being measured. The system consists of a probe clamp, 2 positioning arms, magnetic base, c-clamp base and a micrometer with a 0.28" (7mm) travel. The probe clamp holds probes up to 0.125 in. (3.2mm) in diameter with a reach of approximately 6" (152mm).

The FS-2 is similar to the FS-3 (above) but has 3 fixture arms for finer probe positioning. Additionally, the clamp accepts probes up to 1.0" (25mm) in diameter.
