1. Over View

The display is a TFT active matrix electrophoretic display, with interface and a reference system design. The 10.1" active area contains 1680×2232 pixels, and has 2-16 gray levels (1-4 bits) white/black full display capabilities. With color filter, it also supports a full color model with 4096 colors display.

2. Features

- Carta high contrast reflective/electrophoretic technology
- 1680×2232 resolution
- Ultra wide viewing angle
- Low power consumption
- Pure reflective mode
- Bi-stable
- Commercial temperature range
- Landscape, portrait mode

Panel Power	P		-	285	4680	mW
Standby power panel	P _{STBY}		-	-	1.3	mW

- Note 1:

- The maximum power consumption is measured using 85 Hz waveform with following pattern transition: from pattern of repeated 1 consecutive black scan lines followed by 1 consecutive white scan line to that of repeated 1 consecutive white scan lines followed by 1 consecutive black scan lines.

- Note 2:

- The Typical power consumption is measured using 85 Hz waveform with following pattern transition: from horizontal 4 gray scale pattern to vertical 4 gray scale pattern.
- The standby power is the consumed power when the panel controller is in standby mode.

- Note 3:

- The listed electrical/optical characteristics are only guaranteed under the controller & waveform provided by GOOD DISPLAY.
- Vcom is recommended to be set in the range of assigned value ± 0.1 V
- The maximum ICOM inrush current is about 1000 mA
- Customer need to use decoupling capacitors on each power rail at system board as below table to keep EPD driving power stable.

9. Optical characteristics

9-1. Specifications

Measurements are made with that the illumination is under an angle of 45 degrees, the detection is perpendicular unless otherwise specified.

Note 8-1: Luminance meter: Eye – One Pro Spectrophotometer

Note 8-2: Each update interval time should be minimum at 180 seconds.

Note 8-3: When work in temperature 60 degree, suggest update once every 1hours.

9-2. Definition of contrast ratio

The contrast ratio (CR) is the ratio between the reflectance in a full white area (R1) and the reflectance in a dark area (Rd)() : R1: white reflectance Rd: dark reflectance

$$CR = R1/Rd$$

9-3. Reflection Ratio

The reflection ratio is expressed as :

$R = \text{Reflectance Factor white board} \times (L_{\text{center}} / L_{\text{white board}})$

L_{center} is the luminance measured at center in a white area ($R=G=B=1$) . $L_{\text{white board}}$ is the luminance of a standard white board. Both are measured with equivalent illumination source. The viewing angle shall be no more than 2 degrees.

10. Handling, Safety and Environmental Requirements

Warning
<p>The display glass may break when it is dropped or bumped on a hard surface. Handle with care.</p> <p>Should the display break, do not touch the electrophoretic material. In case of contact with electrophoretic material, wash with water and soap.</p>

Caution
<p>The display module should not be exposed to harmful gases, such as acid and alkali gases, which corrode electronic components.</p>
<p>Disassembling the display module can cause permanent damage and invalidate the warranty agreements.</p>

Observe general precautions that are common to handling delicate electronic components. The glass can break and front surfaces can easily be damaged. Moreover the display is sensitive to static electricity and other rough environmental conditions.

Data sheet status	
Product specification	The data sheet contains final product specifications.
Limiting values	
<p>Limiting values given are in accordance with the Absolute Maximum Rating System (IEC 134).</p> <p>Stress above one or more of the limiting values may cause permanent damage to the device.</p> <p>These are stress ratings only and operation of the device at these or any other conditions above those given in the Characteristics sections of the specification is not implied. Exposure to limiting values for extended periods may affect device reliability.</p>	
Application information

13. Packing

14. Precautions

- (1) Do not apply pressure to the EPD panel in order to prevent damaging it.
- (2) Do not connect or disconnect the interface connector while the EPD panel is in operation.
- (3) Do not touch IC bonding area. It may scratch TFT lead or damage IC function.
- (4) Please be mindful of moisture to avoid its penetration into the EPD panel, which may cause damage during operation.
- (5) If the EPD Panel / Module is not refreshed every 24 hours, a phenomena known as "Ghosting" or "Image Sticking" may occur. It is recommended to refreshed the ESL /EPD Tag every 24 hours in use case. It is recommended that customer ships or stores the ESL / EPD Tag with a completely white image to avoid this issue
- (6) High temperature, high humidity, sunlight or fluorescent light may degrade the EPD panel's performance. Please do not expose the unprotected EPD panel to high temperature, high humidity, sunlight, or fluorescent for long periods of time.
