

MicroWheel Grating Set | Clubmax 10 & 15

PRODUCT SPECIFICATION SHEET

DESCRIPTION

The new **MicroWheel** grating assembly is the latest addition to our range of optical benches that we offer for nearly every single laser display system in the portfolio.

It provides users of compatible Kvant systems with minimalistic and inexpensive, but practical addition of secondary effect that can be quickly installed directly onto the primary aperture of their projector.

The MicroWheel is essentially a rotating grating effect, that is controlled with DMX. It's possible to control its rotation to the left and right and also the speed of the rotation.

Interchangeable grating effects included in MicroWheel package are **Starburst**, **Line-burst** and **Lumina**, and they can be easily swapped one for another as required.

This addition expands the possibilities of the laser system even further and offers three amazing effects for you to use in your shows.
